Education

University of Virginia | Charlottesville, VA

Expected Graduation, Dec 2024

BS in Computer Science, BS in Statistics

Experience

Natera | San Carlos, CA

May – August 2022

Software Engineer Intern

- Designed and developed a Learning Management System web app with Django to allow company employees to easily attain Continuing Education certificates in a self-paced manner by completing course modules and passing assessments
- Proposed and developed a Python-based automatic certificate generation system for instructors to certify all employees who chose to attend live lectures, cutting the usual certification time by more than 50%

AbbVie | Worcester, MA

March – May 2021

Project Engineer Intern

- Collaborated with a team of three engineers to draft updated safety procedures and protocol, as per OSHA Y14.5, reducing workplace injury by 200% in Q3 and Q4 of 2021
- Examined and compared AbbVie's laboratory process of chemical storage and rust prevention with external resources, isolated potential flaws, and suggested improvements to senior employees
- Participated in agile ceremonies including daily stand-ups and one-on-one meetings

Worcester Public Schools | Worcester, MA

May – August 2020

Web Developer Intern

- Designed wireframes and mockups for both mobile devices and web browsers by using Figma
- Developed and adapted the wireframes into a responsive remote learning website for the county schools by using React.js
- Created and implemented a plan with district authorities to improve digital learning and technology availability for students, resulting in the distribution of ~6000 laptops to students to aid remote learning
- Created and published educational technology tutorial videos on the Worcester Public Schools YouTube channel

Projects

Cloud Service Pricing Analyzer | URL: <http://www.cloudpricinganalyzer.com/>

April – July 2022

- Developed and published a Flask web app that finds the best cloud service from several providers based on user criteria
- Used Python optimization techniques to efficiently search thousands of results from the GCP, Azure and AWS Pricing APIs
- Used SQLite to incorporate full CRUD functionality which involves the creation, viewing, and deletion of past reports
- Achieved an average of fifty daily users in first month of service

NFT Minting in Augmented Reality

April – August 2022

- Engineered the complete development of an Android and Windows compatible Web3 app with Solidity, C#, and Unity
- Used Solidity to interact with the Polygon network to allow for user authentication, smart contract and NFT creation
- Allowed for seamless loot box placement and opening, NFT collection, minting, and saving in user's decentralized wallet

Voice AI Controlled Live News App | URL: https://jammel-yeboah.github.io/voice_ai_news_app/

June – August 2022

- Independently built a React.js web app that uses voice AI technology by Alan AI to provide real-time news, weather, calculations, and small talk capabilities based on verbal user input
- Learned how to provision infrastructure through infrastructure as code and manage configuration using Terraform
- Test-driven development of all back-end endpoints using QUnit testing

Skills

Programming Languages: Python, C/C++, JavaScript, HTML/CSS/SCSS, SVG, SQL (MySQL, SQLite)

Platforms: Linux (Ubuntu, Slackware, Debian), Red Hat (OpenStack, CloudForms), OpenVMS, Symbian, Solaris

Tools and Frameworks: PowerShell, Bash, Git, AWS, Docker, NextJS, NodeJS, React.js, Django, Flask

Additional Information
